Professional Summary

Associate DevOps Engineer building continuous integration and delivery (CI/CD) pipelines and automated cloud deployments, with project experience in AWS, Azure, Terraform, Ansible, and Kubernetes. Focused on DevSecOps through container vulnerability scanning, Linux hardening, and secrets management, alongside infrastructure monitoring and an ongoing company-wide backup automation project.

Experience

Associate DevOps Engineer — Port City BPO
September 2026 – Present

- Built a GitHub Actions CI/CD pipeline for a company application, automating deployment to a DigitalOcean virtual private server (VPS).
- Developing a company-wide centralized backup system using Jenkins, ngrok webhooks, Docker, Nginx, and Cloudflare security; implementation is ongoing.

Technical Skills

Cloud: AWS (EKS, EC2, VPC, IAM, S3), Azure (VMs, AKS, ACR), DigitalOcean
Automation & CI/CD: Terraform, Ansible, GitHub Actions, Jenkins, Git, Bash, Python
Containers & Services: Docker, Kubernetes, Helm, Nginx, Cloudflare
Security: Trivy, Linux/SSH hardening, UFW, fail2ban, HashiCorp Vault, IAM policies
Monitoring & Systems: Prometheus, Grafana, Loki, Alertmanager, Linux (Ubuntu, RHEL), TCP/IP, DNS

Projects

GemOps — AWS Kubernetes Infrastructure & Delivery
github.com/Kashmitha/gemops-project

- Provisioned AWS EKS infrastructure with Terraform and S3/DynamoDB remote state; automated Helm deployments with rollback on failed upgrades.
- Integrated Trivy scanning into GitHub Actions to fail builds on fixable critical container vulnerabilities; configured multi-stage Docker builds with a non-root runtime user.
- Configured Prometheus, Grafana, Loki, and Alertmanager for metrics, logs, and Slack alerts; added Vault Kubernetes authentication and application secret policies.

Azure Linux Server Automation & Hardening
github.com/Kashmitha/devops-project-3

- Built four Ansible roles for system configuration, security, Docker, and Nginx, using Azure dynamic inventory and Jinja2 templates; added CI checks for Ansible linting and playbook syntax.
- Automated UFW firewall rules, fail2ban configuration, and SSH settings to disable root login and password authentication.

Education

Bachelor of Science in Computer Science
Eastern University, Sri Lanka — Trincomalee Campus | 2023 – 2026
All academic requirements completed; degree award pending. **GPA: 3.2/4.0**

Certifications & Training

DevOps Certification Program — Intellipaat | February 2026
Linux For Absolute Beginners — KodeKloud | February 2026
Jenkins for Beginners — KodeKloud | February 2026
Docker For Absolute Beginners — KodeKloud | December 2025
